BAB I

LATAR BELAKANG

Kesehatan mental atau *mental health* adalah kondisi kesehatan yang berkaitan erat dengan kondisi emosi, kejiwaan, dan psikis seseorang. Dilansir dari WHO, kesehatan mental adalah keadaan sejahtera atau sehat mental seseorang yang memungkinkan seseorang tersebut dalam mengatasi tekanan hidup, menyadari kemampuannya, belajar dan bekerja secara baik, dan berkontribusi pada komunitasnya.

Kesehatan mental sangatlah penting seperti menjaga kesehatan fisik. Kesehatan mental yang baik dapat membuat pikiran yang lebih positif, dan mempengaruhi seseorang dalam menjalani harinya dengan baik sekaligus kesehatan mental berpengaruh besar dalam mempengaruhi cara seseorang dalam berpikir, merasakan sesuatu, dan berperilaku. Beberapa manfaat dari menjaga kesehatan mental adalah memperbaiki suasana hati, mengurangi kecemasan, berpikir lebih jernih, dan meningkatkan hubungan baik itu dengan diri sendiri maupun dengan orang lain. Jika kesehatan mental terganggu maka berdampak pada banyak hal seperti seseorang bisa merasa kecemasan atau kebingungan bahkan kesal atau menangis tanpa alasan yang jelas, konsentrasi mudah terganggu, mengurangi produktivitas, dan mual muntah yang berkelanjutan. Gangguan mental mencakup berbagai kondisi, di antaranya gangguan kecemasan yang melibatkan kekhawatiran berlebihan dan serangan panik, depresi yang ditandai oleh perasaan sedih yang mendalam, energi rendah, dan gangguan pola tidur, serta gangguan bipolar yang melibatkan perubahan suasana hati ekstrem. Selain itu, skizofrenia juga merupakan penyakit mental serius yang mempengaruhi cara seseorang berpikir, merasa, dan berperilaku. Penting untuk meningkatkan kesadaran dan pemahaman masyarakat terhadap penyakit mental serta mengedepankan upaya pencegahan, diagnosis dini, dan dukungan bagi individu yang terkena dampak.

Di tahun 2022, menurut Indonesia-National Adolescent Mental Health Survey (I-NAMHS) sebanyak 34,9% remaja di Indonesia mengalami gangguan mental, 6,1 % diantaranya merupakan penduduk yang berusia diatas 15 tahun. 1 dari 20 remaja di Indonesia juga melaporkan bahwa dirinya mengalami kecemasan, kesepian, lebih mudah depresi, dan sulit berkonsentrasi. Meskipun kesehatan mental menjadi semakin diperhatikan, stigma terkait masalah ini masih menjadi kendala. Banyak orang yang enggan mencari bantuan atau berbicara terbuka tentang kondisi kesehatan mental mereka karena takut dianggap lemah atau dihakimi oleh masyarakat. Oleh karena itu, penting untuk terus mendukung kesadaran dan pemahaman tentang kesehatan mental di masyarakat. Program-program edukasi dan kampanye anti-stigma dapat berperan penting dalam mengubah pandangan masyarakat terhadap masalah kesehatan mental, membuka pintu bagi individu untuk mencari pertolongan dan dukungan.

Integrasi perawatan kesehatan mental ke dalam sistem kesehatan yang lebih luas sangat penting. Meningkatkan aksesibilitas layanan kesehatan mental, melibatkan praktisi kesehatan umum dalam deteksi dini gejala gangguan mental, dan menciptakan lingkungan yang mendukung kesehatan mental adalah langkah-langkah efektif untuk mengatasi masalah ini secara holistik. Upaya bersama dari individu, komunitas, dan lembaga kesehatan dapat membantu mengurangi prevalensi gangguan mental dan meningkatkan kualitas hidup secara keseluruhan.

BAB II

LANDASAN TEORI

3.1 CONSTRUCTOR

3.1.1 Constructor adalah method khusus yang dieksekusi saat objek (instance) dari sebuah class dibuat. Tujuan utamanya adalah untuk inisialisasi atau persiapan data pada objek yang baru dibuat. Dalam konteks aplikasi atau web yang Anda jelaskan, constructor mungkin digunakan saat membuat objek untuk dokter, pasien, atau sesi pertemuan. Saat objek dokter atau pasien dibuat, constructor dapat menetapkan nilai awal untuk properti seperti nama, alamat, atau informasi lain yang diperlukan.

3.2 OVERLOADING

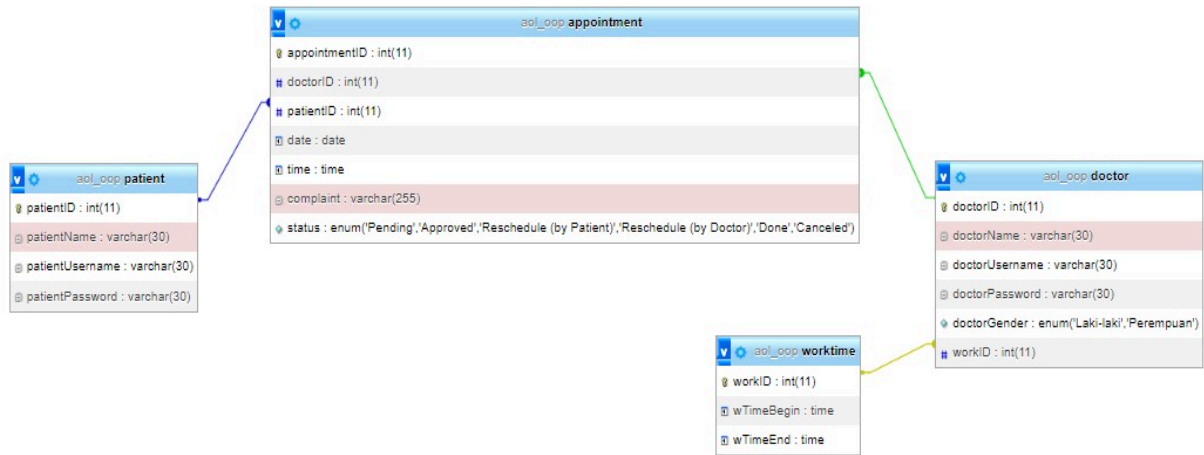

3.2.1 Overloading dalam konteks pemrograman memungkinkan pembuatan beberapa definisi fungsi atau metode dengan nama yang sama, tetapi dengan parameter yang berbeda. Overloading dapat terjadi saat menangani login dokter dan pasien dengan metode yang berbeda, memungkinkan implementasi autentikasi yang berbeda sesuai peran pengguna atau saat menyesuaikan fitur berdasarkan sesi pengguna.

3.3 INHERITANCE

3.3.1 Inheritance adalah konsep dalam pemrograman dimana sebuah class dapat mewariskan properti (variabel) dan metode (fungsi) yang dimilikinya kepada class lain yang diturunkan darinya. Dalam konteks ini untuk manajemen antara dokter dan pasien, inheritance bisa digunakan saat ada class untuk dokter dan class untuk pasien yang mewarisi properti atau fungsi yang mungkin sama atau serupa, seperti informasi kontak, alamat, atau fungsi yang terkait dengan manajemen janji temu.
